

I am in favor of the comment by the The American Radio Realy League regarding Docket ET 03-104. I feel that the comments made by proponents of (BPL) has little credible data to support approval of this docket at this time. More research and innovations in BPL will be needed to stop interference to licensed operations in the 2Mhz - 80Mhz range. Approving ET 03-104 will violate FCC rules on non-interference. This would be contrary to the best interest of the public.
